(a) Both main ports blocked
Supply: $q_s = 0$
Finite oil storage
q_{acc}
Chamber A
q_l
Chamber B
$q_B = 0$
Positive leakage prevents a stationary hold
(b) Supply blocked; return available
Supply: $q_s = 0$
Finite oil storage
q_{acc}
Chamber A
q_l
Chamber B
Tank return
Chamber balance: $q_B = q_l = q_{acc}$
